

Huntsman
Enterprise SIEM
MSSP Edition

The Huntsman MSSP Edition is a highly dependable security platform that will help all MSSPs reduce service delivery costs, simplify the security management process, and accelerate revenue generation from new customers.

Huntsman MSSP Edition has all the features of the Huntsman Enterprise SIEM, plus:

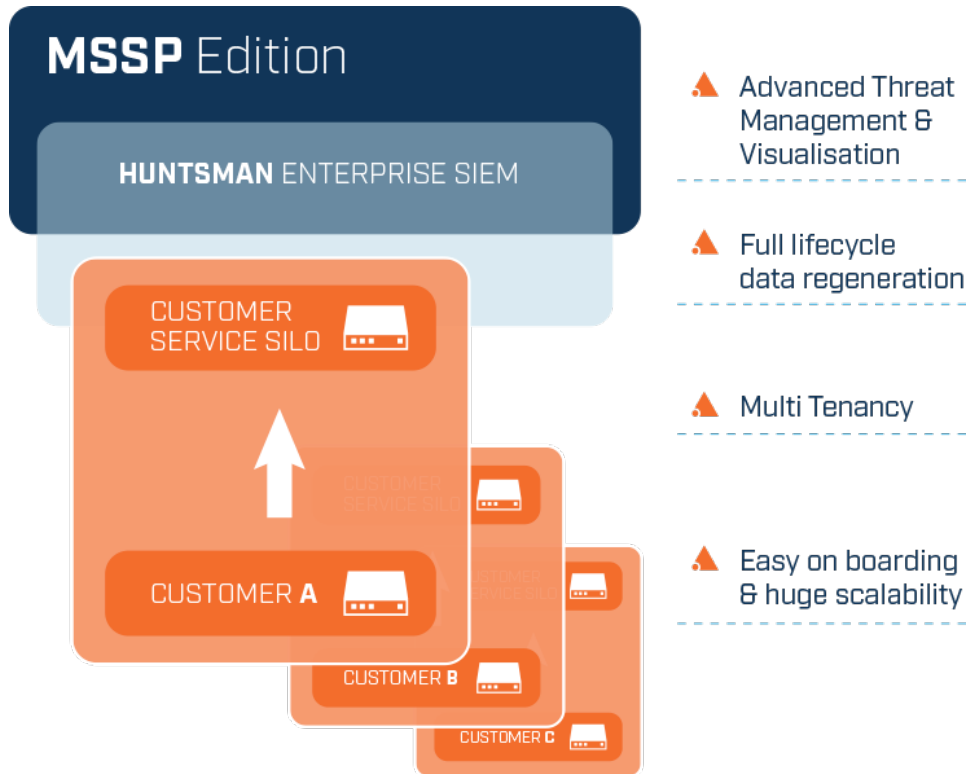

- Multi-tenancy capability – to support a shared services environment with evidential reporting and end-to-end data separation
- Threat intelligence – this combines external and internal threat intelligence to improve detection, the accuracy of alerts, and the efficiency of the security operations triage and diagnostic process
- Robust data management, separation and access control mechanisms
- Threat awareness between and within customer networks – to detect threats more quickly and offer value-added services
- Automation of routine tasks and compliance reporting – to streamline workflow in your security operations centre
- Highly flexible licensing models to suit the variable nature of MSS and control set-up and ownership costs
- Scalability – to meet evolving requirements of customers and regulators.

HUNTSMAN ENTERPRISE SIEM FEATURES:

- Flexible data collection from all log and event sources, as well as from databases, networks and applications
- Advanced analysis engines – both policy and behaviour anomaly based detection
- Effective incident response and alert workflow
- State-of-the-art query interface, data visibility and business intelligence
- Scalable to high data volume processing and big data storage and analysis
- Inbuilt compliance standard support

ADDITIONAL MSSP EDITION FEATURES:

- Multi-tenancy capability
- Full data collection and monitoring
- Extensive Threat Intelligence capabilities for intelligent detection and resolution using both external and pan-customer sources
- Data sovereignty control and management
- A single view of the entire MSSP estate and individual customer reporting

WHY YOU SHOULD CHOOSE HUNTSMAN

Huntsman's technology builds on its origins in complex, multi-domain, sensitive environments like defence, intelligence, financial services and telecoms.

For MSSPs, Huntsman offers distinct advantages in terms of operational efficiency, multi-tenancy, and security monitoring.

OPERATIONAL EFFICIENCY

Huntsman's security platforms are sufficiently adaptable to support your business model. Huntsman reduces upfront and ongoing delivery costs, simplifies solution scalability and security management, and accelerates revenue generation through easier on-boarding of new customers and customised value-added services.

MULTI-TENANCY

Huntsman gives MSSPs the ability to confidently provide true data segregation at both the database layer and administrative interface.

This allows MSSPs to extract significant cost and operational efficiencies by utilising a single SIEM instance to support fully featured managed security services to multiple end users.

THE HUNTSMAN ADVANTAGE FOR MSSPS

Huntsman MSSP Edition has been specifically configured and optimised for MSSP environments.

Coupled with flexible, service and subscription based licencing it provides unparalleled benefits for MSSP customers.

Speed

- Real-time, high-volume activity processing for platforms, infrastructure and applications
- Ease of deployment, expansion and customisation to fit the elastic nature of managed service delivery
- Flexible architecture and high scalability to meet changing end-customer and MSSP needs

Security

- Robust data separation, role-based access control and multi-tenancy support
- Comprehensive audit capability across all operator activity
- Assured segmentation of customer data and reports

Usability

- In-built, continuous compliance monitoring and reporting
- Real time incident management workflow support and drill-down investigation capabilities
- Automation to mitigate attacks, safeguard systems and protect data

Efficiency

- Low TCO, fast ROI and subscription pricing options for effective cash-flow management
- Process automation for lower operational risk and SOC resource management
- Low set-up cost and inbuilt flexibility for value added customisation for end customers

Advanced Threat Detection and Intelligence

- Can take external or cross-customer threat intelligence sources to enable threat information and incorporate it into security decision-making for more reliable, higher-value services
- (Optional) patented 'True' Behavioural Anomaly detection enabling MSSPs to deliver customers advanced real-time monitoring services

ENHANCEMENT OPTIONS

To make it even more powerful, the Huntsman Cloud Edition comes with these enhancement options:

- Behavioural Anomaly Detection for advanced identification of unknown and unknowable threats
- Extended data repository
- High Availability
